

MEET PATEL

Houston, TX (Open to Relocate) | 346 526 5816 | meetpatel03690@gmail.com | [Linkedin](#) | [Portfolio](#)

EDUCATION

University of Houston Clear Lake – UHCL

Jan 2024 - Dec 2025

Master of Science, Computer Information Systems – (GPA: 3.65)

Houston, TX

- **Coursework:** Data Warehouse and Business Intelligence, Database Design C Data Mining, Big Data, Data Visualization

Charutar Vidya Mandal University - CVM

May 2020 - Apr 2023

Bachelor of Computer Application – (GPA: 9.98/10.00 | 4.0/4.0 US Equivalent)

Gujarat , India

- **Coursework:** Database Management Systems, Data Structures C Algorithms, Statistics, Python, Artificial Intelligence

PROFESSIONAL EXPERIENCE

Data Analyst I | NITU Group | Onsite | Houston ,TX, USA

May 2026 – Present

- Integrate and normalize data from 6 source systems (Qu Beyond, SynergySuite, NCR, Toast, Zenoti, FocusPOS) into GCP BigQuery across 94+ franchise locations in TX, FL, and CO.
- Build and maintain **dbt staging and mart models** to transform raw POS, payroll, and inventory data into clean, analytics-ready tables for cross-brand reporting.
- Build and maintain Power BI semantic models and daily & weekly metrics reports across all store locations for each brand (Church's Chicken, Shipley's Donuts, Nothing Bundt Cakes, Cost Cutters & Supercuts) enabling leadership to track cross-brand and cross-store performance.

Data & Insights Analyst (Student Employee) | UHCL [OIAS Office] | USA

Jan 2025 – Aug 2025

- Analyzed 1,000+ international student records using Power BI to uncover enrollment patterns and admission trends, directly informing admissions strategy and resource planning.
- Built interactive dashboards tracking key admissions KPIs, replacing manual spreadsheets workflows and delivering faster decision-ready insights to department leadership.
- Maintained student database ensuring data accuracy and completeness, and trained incoming team members on data workflow and reporting tools also coordinated cross-functional data reporting between admissions and university departments, , improving data consistency across teams.

Data Analyst | Archi Farming Equipment | Remote | India

Jan 2023 - Dec 2023

- Collaborated with team to build Python time-series forecasting models improving demand forecast accuracy by **22%** and reducing stock-outs by **18%**, directly impacting inventory costs and operational efficiency.
- Engineered automated SQL-Python ETL pipelines cutting manual reporting effort by **40%** for 10+ stakeholders while reducing data inconsistencies by **30%**.
- Built Power BI and Tableau dashboards tracking inventory KPIs and performed EDA and feature engineering on 3+ years of historical data, improving production planning efficiency by **15%**.

Data Analyst Intern | Atmiya Developers | Remote | India

Aug 2022 - Dec 2022

- Wrote and optimized SQL queries on **1.5M+ records** to extract, filter, and aggregate data directly supporting product and sales team analysis.
- Built automated SQL-Python reporting scripts reducing manual reporting effort by **30%** and performed ETL-style data ingestion, cleaning and standardizing multi-source datasets for downstream reporting.
- **Validated data accuracy across multiple sources by cross-checking row counts, aggregated totals, and flagging anomalies — ensuring clean, audit-ready outputs before delivery.**

PROJECTS

Azure Databricks Spark-Based Data Engineering Pipeline

[GitHub](#)

- Built cloud pipeline ingesting Tokyo Olympics data via Azure Data Factory into ADLS Gen2, transforming with PySpark in Databricks, and enabling serverless SQL analytics via Synapse Analytics — fully automated, zero manual steps.
- Implemented schema enforcement, data normalization, and partitioning strategies producing a fully analytics-ready dataset accessible via SQL with no manual intervention.

AWS Serverless Event-Driven ETL Pipeline

[GitHub](#)

- Developed event-driven pipeline using AWS Lambda triggered on S3 uploads, transforming raw nested JSON to columnar Parquet format, cataloged with AWS Glue, and queryable via Athena — eliminating all manual data processing.
- Configured IAM roles, S3 event notifications, and Glue crawlers to automate end-to-end data flow, making the pipeline fully production-ready.

TECHNICAL SKILLS

- **Programming Languages:** Python (Pandas, NumPy, Statsmodels, Scikit-learn), SQL (Advanced), PySpark, DAX, VBA
- **Database Technologies :** PostgreSQL, MySQL, Snowflake, Amazon Redshift, Oracle, Databricks, SQLAlchemy
- **BI & Visualization :** Power BI, Tableau, Excel (Advanced), Matplotlib, Seaborn, Excel-based Dashboards
- **Cloud & Data Engineering :** GCP BigQuery, GCP Cloud Storage, GCP Dataflow, GCP Pub/Sub, dbt (data build tool), Azure Data Factory, ADLS Gen 2, Azure Databricks, Azure Synapse Analytics, AWS Lambda, AWS Glue, AWS Athena, AWS S3.
